

# TRAINING ANNOUNCEMENT

## National Conservation Training Center

Course # TEC7102

### New Technologies for Fish & Wildlife Managers

---

This course provides a general overview of the latest technology tools available to managers and natural resource professionals. Discover the benefits and costs associated with adopting these technologies. Geographic information systems (GIS) and global positioning systems (GPS) will be extensively covered. Learn remote sensing techniques and how satellite imagery can be effectively utilized for natural resource planning and management. This NCTC course has several hands-on sessions allowing participants to apply the technology in the field and classroom. Other topics include wildlife surveillance tools, Internet advances, species tag and handling issues, and natural resource information systems.

---
